## **Appendix C- Choice of LACC company models**

| Company Limited by Shares   |  |
|---|--|
| Advantages  | <u>Disadvantages</u>   |
| "Tried and tested" – a flexible and familiar<br>structure which is still the most popular form<br>of corporate JV vehicle.  | Annual and event driven reporting to<br>Companies House means a reasonably<br>high degree of publicity regarding the<br>company. |
| Simple mechanism for introduction of new equity/transfers, although transfers of shares subject to potential 0.5% stamp duty charge. The share capital structure means shareholders can hold different numbers of shares (or different classes) and therefore hold varying levels of influence. | Directors subject to statutory and common<br>law duties, especially if the company is in or<br>is near insolvency.               |
| Nature of shares as an investment gives<br>possibility of future "exit" as well as income<br>return for shareholders, subject to there<br>being sufficient profits available for the<br>purpose of distribution.  | Company treated as a separate taxable entity from its shareholders.  |
| Can be used for LA trading.   | Potential issues surrounding valuation of shares on exit.  |

## Key advantages and disadvantages of common LACC vehicles

| Company Limited by Guarantees   |  |
|---|--|
| Advantages  | <u>Disadvantages</u>   |
| Often used as a vehicle for embedding<br>"social" values (e.g. social objects and no<br>profit distributions to members), without the<br>need to use a CIC, a Society or a charitable<br>company. | Guarantee given by each member<br>represents a future, albeit usual nominal,<br>liability.                                       |
| Membership easily changed by members<br>being admitted or resigning from<br>membership. No issues surrounding<br>valuation on exit.   | Annual and event driven reporting to<br>Companies House means a reasonably<br>high degree of publicity regarding the<br>company. |
| Can be used for LA trading.   | Directors subject to statutory and common<br>law duties, especially if the company is or is<br>near insolvency.                  |
|   | Company treated as a separate taxable entity from its shareholders.  |
|   | Not as easy to distribute profits as with a CLS. CLGs are not appropriate if the   |

| members are looking for a profitable "exit" in the future. |
|--|
| Cannot issue shares as a means of raising finance.         |

| Share Community Interest Company  |  |
|---|--|
| Advantages  | Disadvantages  |
| Vehicle has automatically embedded<br>"social" objects and requirement to use<br>assets towards that social purpose. The<br>creation of a CIC emphasises both its social<br>character and local focus.  | Alongside publicity requirements for a CLS,<br>a Share CIC has additional publicity<br>obligations towards the CIC Regulator.  |
| Simple mechanism for introduction of new equity/transfers, although transfers of shares subject to potential 0.5% stamp duty charge. The share capital structure means shareholders can hold different numbers of shares (or different classes) and therefore hold varying levels of influence. | CIC Regulator has wide powers of<br>inspection and intervention, albeit these<br>would most likely be used in serious cases<br>only.   |
| CIC can raise finance through the issue of shares.  | Returns to equity and debt investors are<br>limited. Surplus assets on dissolution will<br>not go to the shareholders of a Share CIC<br>automatically (unlike the shareholders in a<br>CLS). |
| Nature of shares as an investment gives<br>possibility of future "exit" as well as income<br>return for shareholders, subject to there<br>being sufficient profits available for the<br>purpose of distribution.  | Directors subject to statutory and common<br>law duties, especially if the company is or is<br>near insolvency.  |
| Can be used for LA trading  | Company treated as a separate taxable entity from its shareholders.  |

| Guarantee Community Interest Company  |   |
|---|---|
| Advantages  | <u>Disadvantages</u>  |
| Vehicle has automatically embedded<br>"social" objects and requirement to use<br>assets towards that social purpose. The<br>creation of a CIC emphasises both its social<br>character and local focus. A Guarantee<br>CIC is also "not for profit", given it cannot<br>distribute profits to its members. | Alongside publicity requirements for a CLG,<br>a Guarantee CIC has additional publicity<br>obligations towards the CIC Regulator. |

| Membership easily changed by members<br>being admitted or resigning from<br>membership. | CIC Regulator has wide powers of<br>inspection and intervention, albeit these<br>would most likely be used in serious cases<br>only. |
|---|--|
| Can be used for LA trading.   | No ability to distribute profits to members.   |
|   | Directors subject to statutory and common<br>law duties, especially if the company is or is<br>near insolvency.                      |
|   | Company treated as a separate taxable entity from its members.   |

| Limited Liability Partnership  |   |
|--|---|
| Advantages   | <u>Disadvantages</u>  |
| Not treated as a separate taxable person,<br>so no "double tax" on profits generated,<br>then distributed, to members.   | Annual and event driven reporting to<br>Companies House means a reasonably<br>high degree of publicity regarding the LLP. |
| Flexible vehicle – no Companies Act<br>directors, so no directors' duties (albeit<br>these can be imposed by contract and<br>underlying fiduciary duties probably exist for<br>any LLP management) | Requirement for an LLP agreement to avoid default provisions under the Regulations applying.                              |
|  | Requires a minimum of two members – a company can be incorporated with one.   |
|  | LLPs cannot be used by local authorities if<br>undertaking trading or activities for a<br>commercial purpose.             |

| Society  |  |
|--|--|
| Advantages   | <u>Disadvantages</u>   |
| Lower level of annual and event driven reporting to the FCA than for companies, CIC and LLPs.  | FCA-regulated, which is not as straightforward as dealing with Companies House   |
| Vehicle has automatically embedded<br>"social" objects and requirement to use<br>assets towards that social purpose. A<br>Society is also "not for profit", given it<br>cannot distribute profits to its members | Requires a minimum of three members (or<br>two if both members are themselves<br>Societies).   |
| Mechanism for introducing new members<br>can be straightforward, through issue of<br>new shares.   | Shares do not represent an investment in<br>the Society. Assets cannot be distributed to<br>members, either as profit or on a winding<br>up. |

| Less well-known/used, so less familiar structure than companies, CICs and LLPs. |
|---|
| Society treated as a separate taxable entity from its members.                  |
